

m+plus project Latest Information

We provide you that m+plus projects has 7 hot and latest information before reading white paper.

Please check it and take it into consideration for your invest.

1. We got an offer from **7 cryptocurrency exchange company**
2. 3 of them are one of the **biggest exchange companies.**
4. Malaysia's **one of the biggest retail company join our projects.**
5. Many Japanese company offer for us to make OEM production **with Halal certificate.**
6. **m+plus coin are used** all the supplychain of the products above projects.
7. Japanese legendary singer HYDE will hold the concert in Malaysia. And **m+plus project will serve as the main sponsor** of the concert to have m+plus widely known in Malaysia and South East countries.

4th April 2018

m+plus

The revolution of Medical Supply Chain Management

White Paper

Products of the Medical Group	P13
The Medical Group's Latest business developments	P14
Road Map (to the future!)	P15
How the Capital is used	P16
Presale and Token Sale Overview	P17
The Benefits of Ordering in Bulk	P18
Sales Periods	P19
Our Vision	P20
m+ Token Basic Information	P22
Company Overview	P23
Contact Us	P24

EXEMPTION FROM RESPONSIBILITY

The main part of this work and all the information within are not comprehensive and not exhaustive.

Also, this document does not serve as a contract between our company and any potential buyer of tokens.

Medic Group, included in this white paper, regarding ICO, anything related to ICO, etc. does not guarantee

the accuracy or the integrity of material posted here or elsewhere. It will also not bear any legal responsibility.

The m+plus Token is a "Token" created based on the Ethernet network. They are not intended to constitute securities in any way, shape or form. Also, this white paper is not an invitation to invest in government-issued currency of responsibility, so-called "money". m+plus Token cannot be purchased in government issued currency.

Since some government agencies issue statements about ICO, at the time of issue of this white paper, citizens, residents and holders of Green Cards in the following countries are prohibited from

participating in this ICO:

- The United States of America

(including all remote island regions)

- People's Republic of China ("China")

- (Including Isle of Man, Northern Ireland and the Channel Islands) Great Britain and Northern Ireland,

United Kingdom ("UK")

- Singapore

- New Zealand

This white paper is not intended to give you advice. We also do not recommend exchanging the Ethereum

you may have in your possession for m+ tokens. We ask only those who understand the outline and vision of our

plan to exchange ETH for m+plus.

CONFIRMATION OF IMPORTANT MATTERS

For those who invest in digital currencies, there is a slight risk of theft, so the investor has to take responsibility for themselves when in this sphere of activity.

We strongly urge you to invest only an amount of ETH that you can afford to lose, and caution you in advance that there is a possibility you may lose all of the ETH you have invested.

We do not sell m+plus tokens to assure investment returns, but rather are seeking to create an environment where medical products can be safely traded with m+plus tokens.

Please make your decision whether or not to do business with us with this in mind.

ABOUT ICO

ICO (Initial Coin Offering), is a method for procuring funds by issuing and selling one's own digital tokens.

It is not a form of transferring equity like stock procurement, but rather something like

crowdfunding, where you simply sell tokens. At the time of this token sale, it is not recognized as "virtual currency".

In other words, strictly speaking, ICO is not a "fundraising" method, but rather a "method of selling tokens".

On the purchasing side, those giving money to the project would not be "investors," but rather "buyers of tokens".

At the present time, m+plus token cannot be used as repayment of consideration for an unspecified person, as there is no exchange market for legal currency, bitcoin, or other existing virtual currency

(see article 2, paragraph 5, item 1 of the Settlement of Capital Settlement Act), the above definition also applies to this ICO project.

ICO'S PURPOSE

With the supply chain, from procuring natural resources to the product finding its way into the hands of the consumer,

production and distribution are all inevitably connected. Within this globalized economic environment, when

this supply chain goes beyond countries' borders it can involve hundreds of different processes and dozens of

different countries.

Such types of borderless business dealings are currently being done, and a big problem with them is having to constantly

go back and retroactively confirm and fix a multitude of problems.

In fact, for consumers and fellow buyers, a means of authenticating whether or not what one has bought is the genuine

article has proven to be elusive. This results in widespread illegal activity such as forgery and counterfeiting, and

furthermore it brings about an uncertainty in the product's origin.

When manufacturing things such as functional food and pharmaceuticals, or other medical and high value products,

whether or not they are authentic is a great problem and can affect one's life adversely.

Up until now ensuring accuracy has required a tremendous cost. In fact, when we have exported our products abroad

in the past, we too have experienced our products being counterfeited in certain markets.

In order to make sure that authentic products are shipped overseas, and in order to verify the said distribution, an

enormous cost is necessary, and the result of this is reflected in the price of the final product. Within such a system

only an expensive commodity can be delivered to the marketplace.

What can dramatically improve this situation is the use of the block chain method. The block chain method

is represented by BitCoin, as a virtual currency's basic technology, introduced in 2008 by Satoshi Nakamoto.

It was the origin of a new system.

ICO'S PURPOSE

In this block chain "Distributed type ledger technology", as it is called, business history is not manipulated, and contents are not specified.

Bitcoin, from its start to the present, has not even once been manipulated from outside forces, the system has never been down, it is highly tamper-resistant, and it stays sturdy and robust in any condition. The birth of technology that produces reliable records is upon us.

Up until now it has been impossible to reliably track the supply chain. But thanks to the block chain method the process becomes more transparent and falsification of documents becomes impossible.

From the block chain method, the supply chain has been opened, efficiency has increased, and trust has increased as well.

According to an April 2016 study by the Ministry of Economy, Trade, and Industry, in Japan alone, market worth is estimated to be more than 32 trillion yen.

As for international dealings in medical products, a product's ability to be traced and its reliability is ensured.

Whether or not the raw materials were authentic, whether or not the place of manufacturing was a legitimate factory, whether or not the distributor was actually certified, whether or not the sales company actually sold it appropriately, from the beginning to the end, the block chain system makes sure that each step is recorded and verified. It cannot be manipulated, but it can be inspected and checked on.

In this way, making a supply chain with the emerging block chain technology, we can construct an international platform of medical products, and contribute to the enhancement of the health of the world; this is the objective of ICO.

TOKEN DEVELOPMENT AND THE USE OF SUPPLY CHAIN

In a complicated, complex, globally changing supply chain, a variety of risks come to the surface.

For example, "Product quality," "Forgery/Counterfeiting," "Security/Customs," "Bribery and Corruption," "Water resources

and chemical waste," "Workplace environment and labor exploitation," "pollution," "environmental destruction," problems such as these.

Up until now, with the centralized supply chain management, when dealing with the above problems,

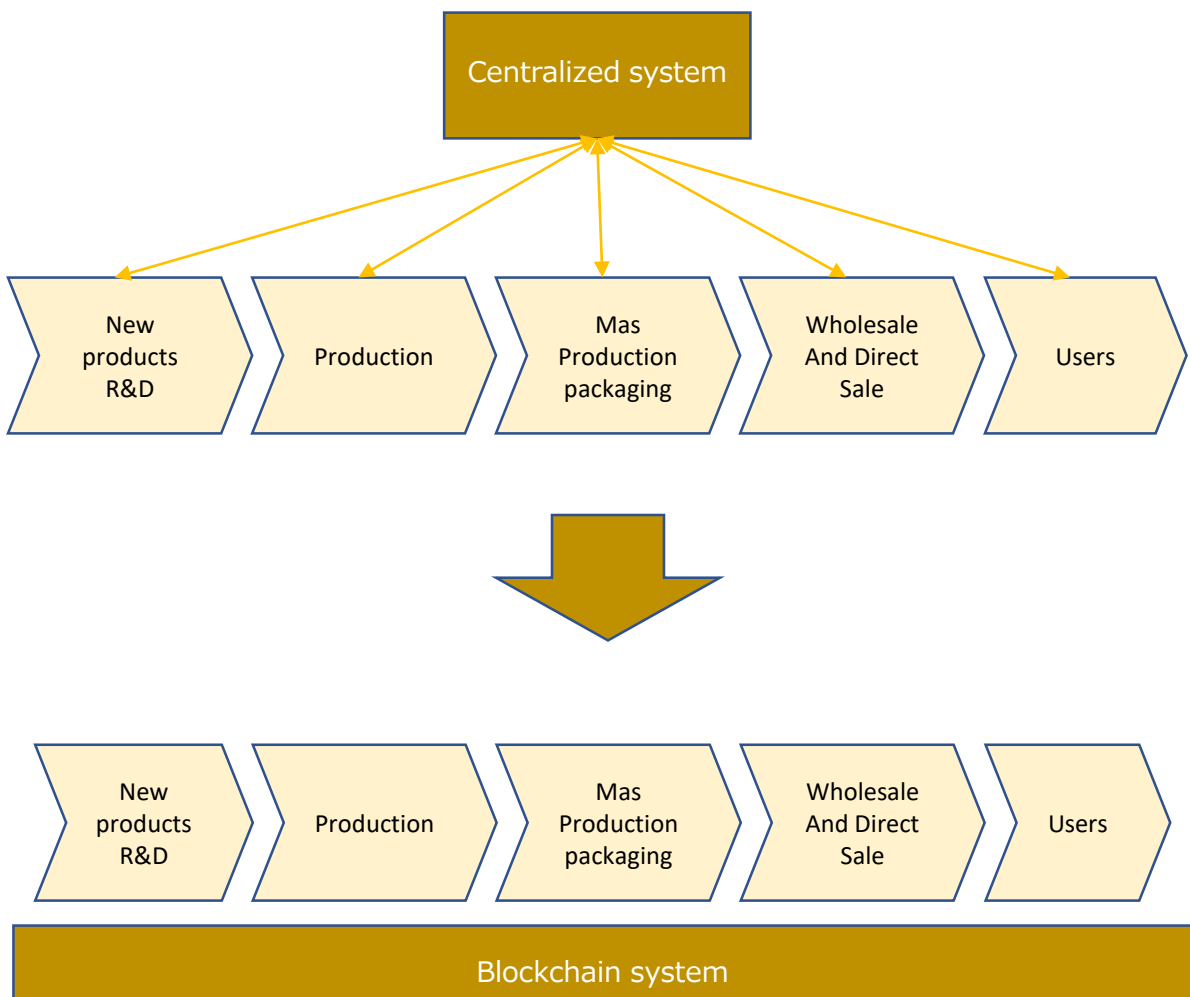

effective countermeasures were inadequate, and this resulted in an inadequate management of the supply chain.

TOKEN DEVELOPMENT AND THE USE OF SUPPLY CHAIN

If one cannot manage the supply chain, the damage caused by the shortcomings of just one supplier can negatively affect one's reputation, and in turn one's business, in the years to come.

For example, an apparel manufacturer in a developing country might have a labor exploitation problem, and criticism from the orderers might come flooding in, but because of the complicated and international nature of the supply chain, damage control would prove to be difficult.

TOKEN DEVELOPMENT AND THE USE OF SUPPLY CHAIN

Also managing from a central server can be perpetually troublesome. If that server stops functioning, if one thinks about the effect that can have on the supply chain, a double or even triple backup system might be necessary in order to keep

a server operating. Lengthy, redundant processes are involved, such as security strengthening and power supply stabilizing, the cost of maintaining a system becomes enormous, and that inevitably is reflected in the price of the product.

The block chain method, as mentioned above, protects the business history with a dispersed secret code in order to combat potential outside manipulation. If and when supply chain problems arise, the

possibility of offering the proper solutions is high. We have developed the m+plus token system with all this in mind.

OVERVIEW OF THE MEDICAL GROUP

Medic Group

Medic Group, founded on November 17th, 2005, is a group of companies engaged in consulting for anti-aging products and medical care, and also deals with management and franchising of beauty salons. Always aiming to be one step ahead in customer satisfaction, since our founding we have steadily expanded our business and made progress. Along the way, we have responded to the times in medical and cosmetic fields for many years.

Our concept is to always aim for the viewpoint of the consumer (Customer Satisfaction is the Most Important Thing). While keeping this in mind, we are going forward with new products, production, and sales promotion activities.

To respond to changing social conditions and customer consumption, besides traditional distribution routes we are cultivating new sales channels and working on product development.

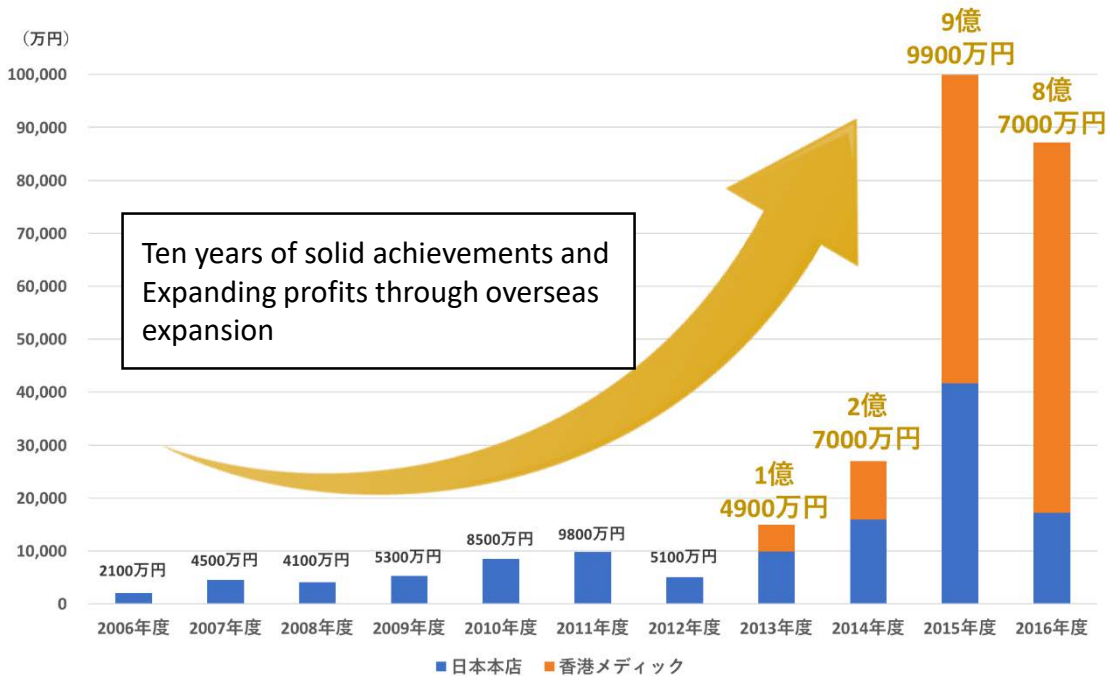

Now, Medic Group is in the process of relocating its main office facilities to Malaysia, as well as acquiring one of the top five pharmaceutical companies in Malaysia; in doing so, we are actively advancing into the pharmaceutical field.

What's more, we have acquired Halal certification. With one-fourth of the world's population following the Islamic faith, we can expand our sales channels in these markets with our medical and cosmetic products.

What's more, with the funds raised from ICO, in order to revolutionize the distribution of products, the supply chain will utilize the block chain method, and this will create a de facto standard for international transactions.

OVERVIEW OF THE MEDICAL GROUP

Since Medic Group has founded, our growth has steadily continued, and in recent years from our overseas expansion we have seen a significant increase in sales.

With ICO as the implementing entity, we here at Medic Group, based on solid results in Japan and overseas, and also because we know the distribution site, we can implement the new supply chain with block chain technology.

The market size of the supply chain through the block chain method is estimated by the Ministry of Economy, Trade and Industry soon to grow worth more than 30 trillion yen in the near future. As soon as possible, when we construct a platform in the medical field, and it becomes the de facto standard, we can further expand our achievements, and return the profits to the token holders.

PRODUCTS OF THE MEDICAL GROUP

Medic Group from the beginning has been striving to create products that make its customers happy.

Main products have also obtained a manufacturing patent. We are manufacturing in a unique way.

Also, we already have an overseas sales channel, and we plan to continue expanding globally in the future.

Furthermore, we have a correspondence with a manufacturing base in Malaysia which produces Halal certified products.

All over the world, one consumer in four follows the Islamic faith, so we are developing business with a view to provide appropriate quality products for these customers. This project involves every step in the process, from production of raw materials, to the manufacturing of medical products, to international distribution, to finally sale to the consumer.

All of these groups will be involved together in the process. Because it is a field where more reliable development can be expected, and because a more reliable environment for development and innovation can be constructed, we will be pioneering development in the industry.

Medic-SilkFibroin

Silk Fibroin

Nano-level silk fibroin provides fat absorption and other outstanding benefits. Its ingredients promote both health and beauty.

THE MEDICAL GROUP'S LATEST BUSINESS DEVELOPMENTS

1) Malaysia's pharmaceutical business

We are affiliated with one of the high level pharmaceutical companies in the Malaysian domestic market.

What's more, Japanese brands will be introduced, and we are aiming for sales with Malaysian companies to exceed 10 billion yen.

2) The Overseas Expansion of Silk Fibroin

We are further developing silk fibroin, a patented product, overseas. We plan on expanding silk fibroin to countries including Malaysia, India, Indonesia, South Korea, and China. We have already been given permission to begin sales in Malaysia, and sales outlets have already been determined.

3) Expanding Halal Certified products in the World

Currently 99% of our deliveries ordered by the government in the pharmaceutical plants are products developed for those in the Islamic market. We have acquired Halal certification, and plan to export these products all over the world.

4) Super Placenta Medicine Authorization

We have been given permission by Malaysia to make super placenta medicine, and with this approval we can enter the world market with human placenta extract products, with potentially spectacular results.

5) Blockchain supply chain management system development

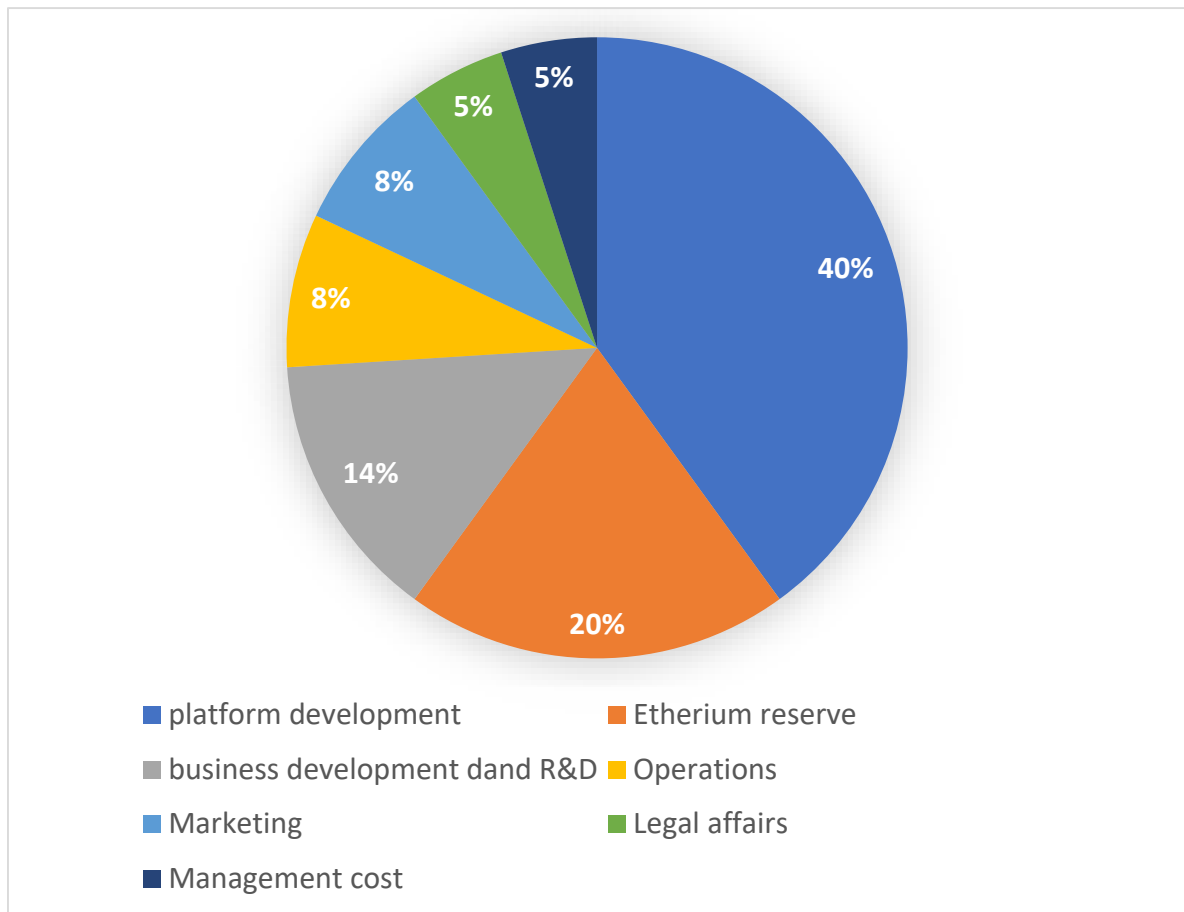

Start R&D with Blockchain engineer to develop blockchain based supply chain management.

ROAD MAP (TO THE FUTURE!)

時期	内容
First half of 2018:	ICO (Presales) begins Head office facilities transfer to Malaysia Affiliation of major pharmaceutical company in Malaysia Establishment of liaison office in Japan (April 9th)
Second half of 2018:	Block chain distribution platform development begins Halal certified silk fibroin will be determined
First half of 2019:	Super placenta medicine approval Block chain platform internal operations commence China, Thailand, Taiwan, South Korea and others join the distribution platform
Second Half of 2019:	Japan affiliates with other major pharmaceutical companies by joining the platform Product manufacturing acceptance of Halal certification to Japanese companies Product distribution to Islamic markets commences

HOW THE CAPITAL IS USED

Regarding funds gathered from ICO sales, following the road map, 40% from the block platform goes to further development of the international distribution platform. This occurs through hiring recruitment, base development, research development, and demonstration tests, among other things.

Also, to prepare for the unforeseen circumstances, from total funds we store 20% of ethereum. In addition, we allocate appropriately for legal affairs relating to distribution of international relations, marketing, and so forth, and aim for realization of our original purpose.

PRESALE AND TOKEN SALE OVERVIEW

TOKEN TOTAL ISSUE COUNT

3 billion MPL

TOKEN DISTRIBUTION

Token distribution, 50% ICO sales, 20% Medic Group ownership, 10% team ownership, 20% Tokens for supply chain development use

TOKEN EXCHANGE RATE

1 ETH equals 10,000 MPLs (m+plus token)

THE BENEFITS OF PEOPLE ORDERING IN BULK

Medic Silk Fibroin or Essence m+plus Super Stem Cells
(12,960 yen)

It can be purchased at the price listed below

(For those with more than 10,000 tokens)

Available for 10,000 yen

Other Medic Group products can be purchased for 20% off

(For those with more than 50,000 tokens)

Available for 9,000 yen

Other Medic Group products can be purchased for 25% off

(For those with more than 100,000 tokens)

Available for 8,000 yen

Other Medic Group products can be purchased for 30% off

(For those with more than 500,000 tokens)

Available for 7,000 yen

Other Medic Group products can be purchased for 35% off

(For those with more than 1,00,000 tokens)

Available for 6,000 yen

Other Medic Group products can be purchased for 40% off

TOKEN SALE

Phase 1 of Token Sales starts from February 20th. Phase 1 ends on April 30th, and after that Phase 2 and Phase 3 of Token Sales will commence.

The exchange rate is 1 ETH for 10,000 MPLs. However, a predetermined bonus is added for each period. For example, from February 20th to February 28th, in addition to 1 ETH being equal to 10,000 MPLs, a 100% bonus (in this case, 10,000 more MPLs) will be added, so for 1 ETH, 20,000 MPLs will be sent.

Token Sales are mediated through a smart contract, ETH is transferred to the specified contract address, and tokens are distributed automatically.

期間	ボーナス	販売枚数
From 20 th Feb.	100%	280 million tokens
From 17 th March	80%	126 million tokens
From 2 nd April	70%	119 million tokens
From 17 th April	60%	112 million tokens

OUR VISION

Truly for all the people of the world, we want to make their outside and their inside forever young, beautiful,

heart-rich. For them to spend their lives like that, what is truly necessary? The one

answer to this question is this: the distribution revolution through block chain technology/the block chain method.

What are considered really good things? That which is just a forged article, an imitation article or knock-off

is easy to encounter. What's more, there is no way for consumers to verify the authenticity. As a result,

regular distribution is prevented from happening, to manage this international transportation cost increases,

and for people of the world new technological innovations and products cannot get through, cannot spread.

This becomes a problem.

OUR VISION

If we make use of block chain method/technology in management of medical products on an international business platform,

things such as raw materials and factories are clearly shown in the business history.

They can quickly and properly support and back proper business dealings.

Many food makers and medicine makers do business dealings on a platform, and around the world they truly have wonderful

products that are sold at a fair, reliable price. If this can be done well, all the people can receive this benefit.

We ourselves, from the Malaysian pharmaceutical business to within Japan, and then to outside countries where the

distribution business continues, from production to distribution to sales, can cover all groups of business.

The business system shows we can deal in medical products internationally and establish a de facto standard,

committed to the happiness of the people of the world.
