## INTRODUCTION

Blockchain technology and cryptocurrency market are growing at incredible rates, with thousands of daily newcomers into this world, most of the top cryptocurrencies still use proof-of-work (hardware mining) algorithms to ensure their network stability and security, this is translated in millions of ASIC miners connected around the world by individuals or huge mining operations which consume a lot of electricity and this is extremely bad for the environment.

## THE PROBLEM

As Bitcoin mining is coming to an end, only 4 million BTC are left to mine and bigger mining operations will come to light, more and more hardware is being manufactured and distributed around the world for bitcoin and several currencies, and as the market continues to grow, this problem will get bigger, as you know cryptocurrencies also carry a difficulty retargeting algorithm, meaning you need more hardware and electricity consumption through time to ensure you mine the same amount of coins you were mining in the past with your operation, or more.

## THE SOLUTION

Many Developers, communities and companies are aware of this problem, cryptocurrencies such as Dash, Pivx or Crown are now running Masternodes or Staking, sometimes combined with POW mining to ensure their network security and stability, now many coins are surging with Masternodes and Staking technology and giving high rewards to their holders. Owning and running a Masternode can be sometimes expensive and may require a lot of technical knowledge, we at MASTERCLOUD aims to create a massive tokenized Masternode operation that will be 100% environmental friendly, secure and rewarding for its members.

## THE TEAM

### Gabriel Gonzalez:

Co-Founder of Mastercloud project, Gabriel is a Blockchain enthusiast with deep knowledge of the environment, Certified Bitcoin Expert by Crypto Currency Certification Consortium under ID: 997dce (<https://cryptoconsortium.org/lookup/997dce>) and Crypto-Entrepreneur. Worked at Fastenal company then realized Blockchain is the future and resigned his job to create great Blockchain and cryptocurrency related projects.

(HIRING NEW TEAM MEMBERS FOR THE PROJECT, FULL TEAM WILL BE DISCLOSED AT BLOCKCHAIN EVENTS AND AFTER PRIVATE SALE IS FINISHED)

## MASTERNODE OPERATION

As security is our biggest concern, Masternode Servers will be hosted with the best and most secure providers in the market, Masternodes collateral will be held by MASTERCLOUD in high security vault installations and masternode hosting will be done through a third party provider, we will hire skilled security companies to ensure online and physical security of Masternodes. Operation revenue will be automatically transferred to ETH, to ensure secure distribution to token holders through Smart Contracts.

Once a masternode is dead or not generating income, MASTERCLOUD will sell collateral for ETH at best possible price and distribute through dividends if there is not an option to replace the dead MN, we will only host well established Masternode Coins with 24hr trading volume of more than 100k USD and Market cap higher than 10 million USD, we will never risk betting on new MN coins unless they reach this criteria, dividend payment process will be fully automated through smart contracts

MASTERCLOUD will reinvest 15% of all dividends into new node instances to ensure profitability and 10% for operational costs, 75% will be distributed weekly to token holders.

High Risk Masternodes will have a 1 month cycle in which collateral will be sold and distributed among token holders if we don't start a new cycle for it.

All crypto related investment is high risk and you should not invest more than you can afford to lose, by acquiring tokens you are lending ETH or BTC to us to have access to our service benefits by being a token holder.

## TOKEN INFORMATION

Mastercloud will develop a fully secure and regulated ERC-20 compliant Token (MAST) built on top of the Ethereum Network and it will be audited by the best in the field. You need to store your MAST in your Ethereum wallet in order to receive revenue. Operation revenue will be distributed amongst token holders in ETH each fortnight, no fiat is involved in the process.

## ROADMAP

### **Private Sale and Angel Round - Q1 to Q4 2018:**

Min cap set for this Round is 100 ETH, this will ensure product development, and set up our first 5 Masternodes in the list. Round will end until 100 ETH reached.

### **Main Sale - Q1 to Q2 2019:**

Min Cap set for this ico is 10,000 ETH, this will ensure Masternode collateral acquisition and Masternode Set-up, will cover exchange related fees and Server Installation costs with third party provider, security improvements and web platform development as well as auditors cost, up in Etherdelta/IDEX after ICO, Will be developed in phases of 2 months each where we will set-up new masternodes and activate Token rewards while main sale is Live.

### **Platform Launch - Q3 2019:**

After succesful ICO, we will launch platform for token holders, where you can watch real time MN performance and dividend payout just with your ETH address, Beta testing will be realeased to Private Round buyers first and launched to general public after sucessful testing. Since process is fully automated, this platform will be for informational purposes only.

### **Exchange Listings & Android/IOS app- Q4 2019:**

Listing in one or 2 major exchanges  
Binance/Bittrex/HitBtc, IDEX and research for more after succesful project launch.  
App launch for android and IOS devices where you can watch real time statistics and performance with your ETH address, exclusive for token holders (beta testing for private sale first).

## TOKEN SPEC & ICO FUNDS DISTRIBUTION

Token: Mastercloud, ERC20 Ethereum Token

Token Short: MAST

Total Supply: 100,000,000 MAST

Distributed: 93,000,000 MAST

Team: 5,000,000 MAST

Private Sale: 2,000,000 MAST

**Price: 1 ETH=10,000 MAST**

Unsold Tokens will be Burned right after Token Offering  
Bonus will be distributed after Private Sale.

### **ICO FUNDS DISTRIBUTION:**

**70%** Masternode Collateral & Setup

**30%** IT security Compliance, Platform & web  
Development, Team salary, Legal Compliance and  
Third party providers, Marketing.

## FINAL NOTES AN CONTACT

Mastercloud aims to be a revolutionary fully regulated Masternode as a service project, encouraging environmental-friendly methods and algorithms for running a cryptocurrency network, nowadays there are many positioned POS & Masternode Cryptocurrencies out there that offer decent returns on your investment for helping the Network by running a Masternode, we can add several MN instances in one server plus the added value that we don't have to invest in expensive mining equipment, there are not electricity fees

involved and the initial investment used for MN collateral can be recovered if we choose to do so as a community (polls will be held if this were to be the done)

Updates will be made through Telegram Channel exclusive for ITO contributors and Weekly Blog posts. We promise full transparency by submitting to a vote all important events such as MN acquisition or Elimination.

We will end all roadmap milestones as published in website, roadmap is live and updated so you can keep track of everything.
