

OID PROJECT

“Decentralized Road to Recovery” Solving a World Epidemic!

ADVANCED BLOCKCHAIN TECHNOLOGY FOCUSED ON LIBERATING
VICTIMS OF OPIOD ADDICTION THROUGH CUTTING EDGE TECHNOLOGY
KNOWN AS THE NALTREXONE IMPLANT

Introduction to OID

The OID Project is focused on empowering users with economic freedom through blockchain technology while supporting a cutting edge medical process to help those addicted to opiates become “SoberLifeUSA” and ultimately eliminate this great scourge of addiction! OID is a partnership between Cryptofarm 7 and Sober for Life USA.

THE FOUNDERS

SoberLife USA

TAKES THE CRAVING AWAY

The OID Project will issue ERC20 Utility Tokens that run on the Ethereum protocol. The OID Utility Tokens are available for purchase at <http://oid.life/buy-token/>. OID Utility Token will be a Proof of Work utility token. These Utility Tokens can potentially be exchanged for OID Coins in the future. The OID Coin is expected to be released in late August 2018.

50% of the profits from the OID Project will be donated to victims of opioid addiction. Cryptofarm 7 will arrange transportation for individuals who are approved to enter the SoberLifeUSA Program which is located in Fountain Valley, California. Their link is attached below for reference <https://soberlifeusa.com>.

The OID Project is focused on empowering users with Freedom through blockchain technology namely the Ethereum Request for Comment Network, Unique Proposal ID 20. The ERC20 offers a set of rules which must be adhered to in order for the Token to be classed as an ERC 20 Token. These standard rules are required to allow the ERC20 coin to interact over the Ethereum network. The tokens are then considered to be Blockchain Assets.

There are many types of freedom OID can offer including freedom to be a blockchain entrepreneur, freedom to be a cryptocurrency investor, freedom to process secure and private transactions, freedom to make a positive impact on the world and spread a life changing product that can affect not only the lives of victims of opiate addiction but also the lives of their family and friends. OID Project allows users the freedom to do the right thing and feel great about the investment along the way!

Road Map for the OI.D Coin Project

Q1 2018

Form Partnership with SoberLifeUSA
Create: Oid.Life Website
Discord
Twitter
Facebook
GitHub
Bitcoin Talk
Token Test Net

Q1 2018

Launch the OI.D TOKEN
Listed on Exchange
Form Oid.Life Charity
Digital Marketing Plan
Recruit More Developers

Q2 2018

Release White Paper
Build Community Support
Fork Blockchain for COIN
PreMine and Testnet of COIN
Start Buildout of OI.D COIN
Build Wallets
Build Mining Pools

Q3 2018

Get listed on more exchanges
Trade Tokens in for OI.D Coin
Start Public Mining of OI.D Coin
Work with Insurance Companies for
Partnerships

Q4 2018

Release Masternodes
Future Projects and Improvements with the
help of the community
Scalability and Improvements

We begin attacking Opiate Addiction and rebuilding the lives of victims and their families!

Security

OID Utility Token an ERC20 Utility Token offers the security and widespread acceptance of the Ethereum Protocol which is faster than BTC and has lower fees than BTC. OID Coin will issue 210,000,000 tokens in total which will have the potential to be converted to coins. Our Soft Market Cap is \$10,000 our HardCap is \$50,000,000

3,000,000 Tokens are in reserve and once created, the ERC20 tokens will be distributed as follows:

- Contributors – 50%
- Company – 20%
- Advisors and Team – 13.6%
- Investors – 15%
- Bounty – 1.4%

All unsold tokens will be destroyed at the end of the ICO.

OID Coin has powerful privacy features built into the protocol which provide investors the right and ability to trade and purchase goods and services within their sphere of privacy.

This allows entrepreneurs to release their products and to crowdsource funds from an audience that may always prefer to maintain their

privacy. We sincerely hope that other projects which are designed to help others can be built on top of the OID Project.

Operations

OID Coin is run by a team of experts at Crypto Farm 7 in all things Blockchain. The founders of OID Coin, Chad Atkins and Dan Francis, have extensive experience building and running large scale mining farms, building and operating master nodes, building and offering mining pools, modifying blockchain code and much more.

Chad and Dan have brought Clinton Calhoun on to the team. Clinton is an expert coder and he has experience modifying Blockchain code, programming master nodes, creating mining pool nodes and most everything else involving cryptocurrency whether it's the hardware or the software side.

As a means of continuing its operations and growing the OID Project to its maximum potential, the founders of the OID Project will pre-mine less than 2% of the total amount of OID Tokens being released. This will great value which the OID Project can then use to keep the project growing and moving forward in order to help individuals investing in the project, miners mining the utility tokens and ultimately victims of Opioid Addiction and their friends and families.

Why IS OID Token based on the Ethereum Protocol?

Ethereum blockchain operates as a “trustless” transactional system — a framework in which individuals can make peer-to-peer transactions without needing to trust a third party OR one another. [3]

1) SECURITY

Blockchain definition – What is it?

“A blockchain is a **“cryptographically secure transactional singleton machine with shared-state.”**

- **“Cryptographically secure”** means that the creation of digital currency is secured by complex mathematical algorithms that are obscenely hard to break. Think of a firewall of sorts. They make it nearly impossible to cheat the system (e.g. create fake transactions, erase transactions, etc.)
- **“Transactional singleton machine”** means that there’s a single canonical instance of the machine responsible for all the transactions being created in the system. In other words, there’s a single global truth that everyone believes in.
- **“With shared-state”** means that the state stored on this machine is shared and open to everyone.” [3]

2) SPEED

How fast is the Ethereum Blockchain currently?

“Because of the way Ethereum is built, block times are much lower (~15 seconds) than those of other blockchains, like Bitcoin (~10 minutes). This enables faster transaction processing.” [1]

3) Mining proof of work

“The algorithm that gives meaning to block difficulty is called Proof of Work (PoW).

Ethereum’s proof-of-work algorithm is called “[Ethash](#)” (previously known as Dagger-Hashimoto).

The algorithm is formally defined as:

$$(m, n) = \text{PoW}(H_{\mathcal{H}}, H_n, \mathbf{d})$$

where ***m*** is the ***mixHash***, ***n*** is the ***nonce***, ***H_n*** is the new block’s header (excluding the ***nonce*** and ***mixHash*** components, which have to be computed), ***H_n*** is the nonce of the block header, and ***d*** is the ***DAG***, which is a large data set.

In the “*Blocks*” section, we talked about the various items that exist in a block header. Two of those components were called the **mixHash** and the **nonce**. As you may recall:

- **mixHash** is a hash that, when combined with the nonce, proves that this block has carried out enough computation
- **nonce** is a hash that, when combined with the mixHash, proves that this block has carried out enough computation

The PoW function is used to evaluate these two items.

How exactly the **mixHash** and **nonce** are calculated using the PoW function is somewhat complex..." [1] and beyond the scope of this White Paper though it is an interesting topic.

Conclusion

OID Utility Token Embraces Proof of Work (POW) systems in its Blockchain Technology and these tokens can currently be purchased at <http://oid.life/buy-token/>. This Utility Token is an ERC20 based token which "piggybacks" on the Ethereum platform and it has the power to make some huge, positive changes in the world namely by fighting the scourge of Opioid Addiction facing our country at this time. While the OID Utility Tokens have no value right now they are anticipated to be able to be traded in for OID Coins when they are released in late July.

Thank you for your time and please feel free to reach out at any time with questions or concerns to the team at www.oid.life.

The OID Coin

CryptoFarm7 has already built, created and pre-mined the OID Coin. The OID Coin is built on the Litecoin Network. Wallets have are built and ready for download, the blockchain has been tested and is Scrypt Based for Mining. CryptoFarm7 has also build a mining pool where miners can mine the coin when released to the public. Once the Token sale is over, We will release the OID Coin and let holders of the OID Token exchange their tokens for the OID Coins.
